

## Consent for Use of Freed AI During Appointments

At Gladstone Psychiatry and Wellness we aim to provide the best possible care. This includes frequently looking into new strategies to help maximize our provider patient interactions. In an effort to do this, we are now using Freed AI, which is an artificial intelligence tool that helps summarize what is said in the appointments. This allows the provider to focus more on the patient in the moment, and not be distracted by as much typing and other computer documentation.

### What is Freed AI?

Freed AI is a tool that listens to the conversation during an appointment and creates a written summary based on that conversation. This note is then edited and signed by the provider. Freed AI works in the background, and does not interact with the provider or patient directly.

### Data Privacy and Confidentiality

Freed AI ensures the security of the transcribed conversation by adhering to HIPAA-compliant data storage and processing protocols. Furthermore, the recording of the conversation is never stored. Third parties do not have access to your conversations or summaries. The standard deletion time for patient information is 30 days; if needed the provider can request the deletion of information sooner than that.

### Consent

Patient participation is completely voluntary. Please let the provider know if you have any additional questions. If the patient or parent/guardian wishes to revoke consent for using Freed in the future, please let the provider know. Choosing not to use Freed AI will not negatively impact a patient's care.

I agree to the use of Freed AI during my / my child's appointments at Gladstone Psychiatry and Wellness

I do not agree to the use of Freed AI during my / my child's appointments at Gladstone Psychiatry and Wellness
